

**3-TERMINAL 100mA POSITIVE ADJUSTABLE REGULATOR**

This monolithic integrated circuit is an adjustable 3-terminal positive voltage regulator designed to supply more than 100mA of load current with an output voltage adjustable over a 1.2 to 37V. It employs internal current limiting, thermal shut-down and safe area compensation.

**FEATURES**

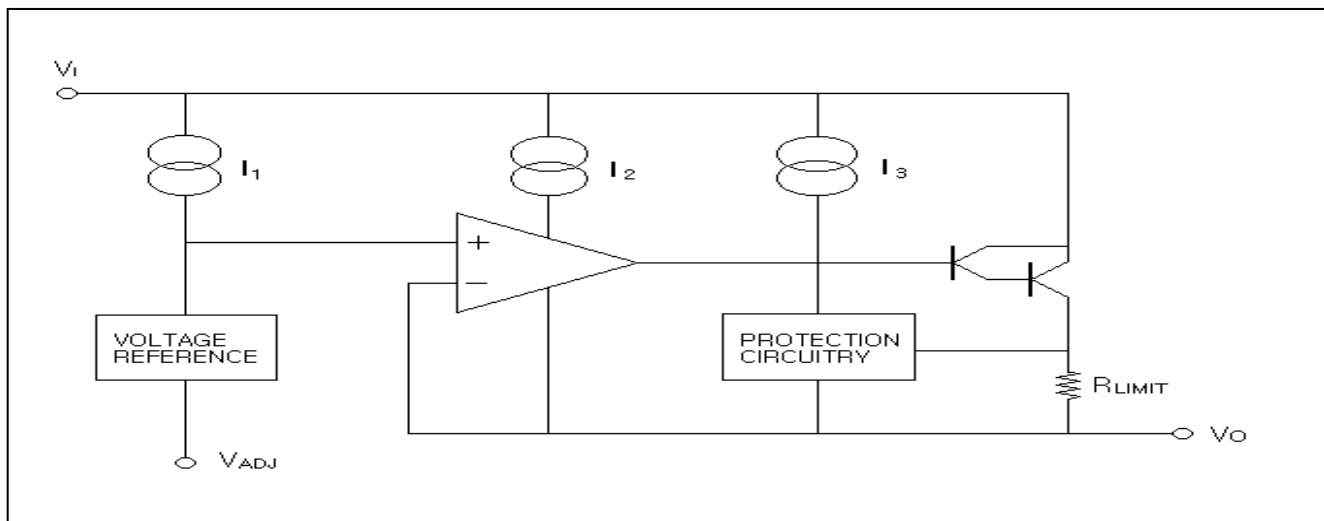

- ◇ Output current in Excess of 100mA
- ◇ Output Adjustable Between 1.2V and 37V
- ◇ Internal Thermal-Overload Protection
- ◇ Internal Short-Circuit Current-Limiting
- ◇ Output Transistor Safe-Area Compensation
- ◇ Floating operation for high voltage applications

TYPICAL APPLICATIONS

Fig.5 Programmable Regulator

$C_i$  is required when regulator is located in appreciable distance from power supply filter.

$C_o$  is not needed for stability, however, it does improve transient response.

Since  $I_{ADJ}$  is controlled to less than  $100\mu A$ , the error associated with this term is negligible in most applications.
