

GENERAL DESCRIPTION

The L1087G Series are positive and low dropout three-terminal voltage regulators with 0.8A output current capability. These devices are designed for use in low voltage applications that offers lower dropout voltage and faster transient response.

These devices are fully protected against over current faults, over temperature operation, reversed input polarity, reversed lead insertion, transient voltage spike ...etc.

On-Chips trimming the reference voltage to 1% and features the low dropout of maximum 1.45 volts.

The L1087G Series regulators offer fixed and adjustable voltage options available in the space saving SOT-89 & TO-92 package.

- Fixed Voltage Regulator -

ABSOLUTE MAXIMUM RATINGS

- Maximum Supply Voltage 15V*
- Power Dissipation Internally Limited
- Thermal Resistance Junction to Case, θ_{JC} 18 °C/W
- Thermal Resistance Junction to Ambient, θ_{JA} 160 °C/W
